

One connected system
for every step of
resection.

See clearly.
Treat precisely.
Work efficiently.

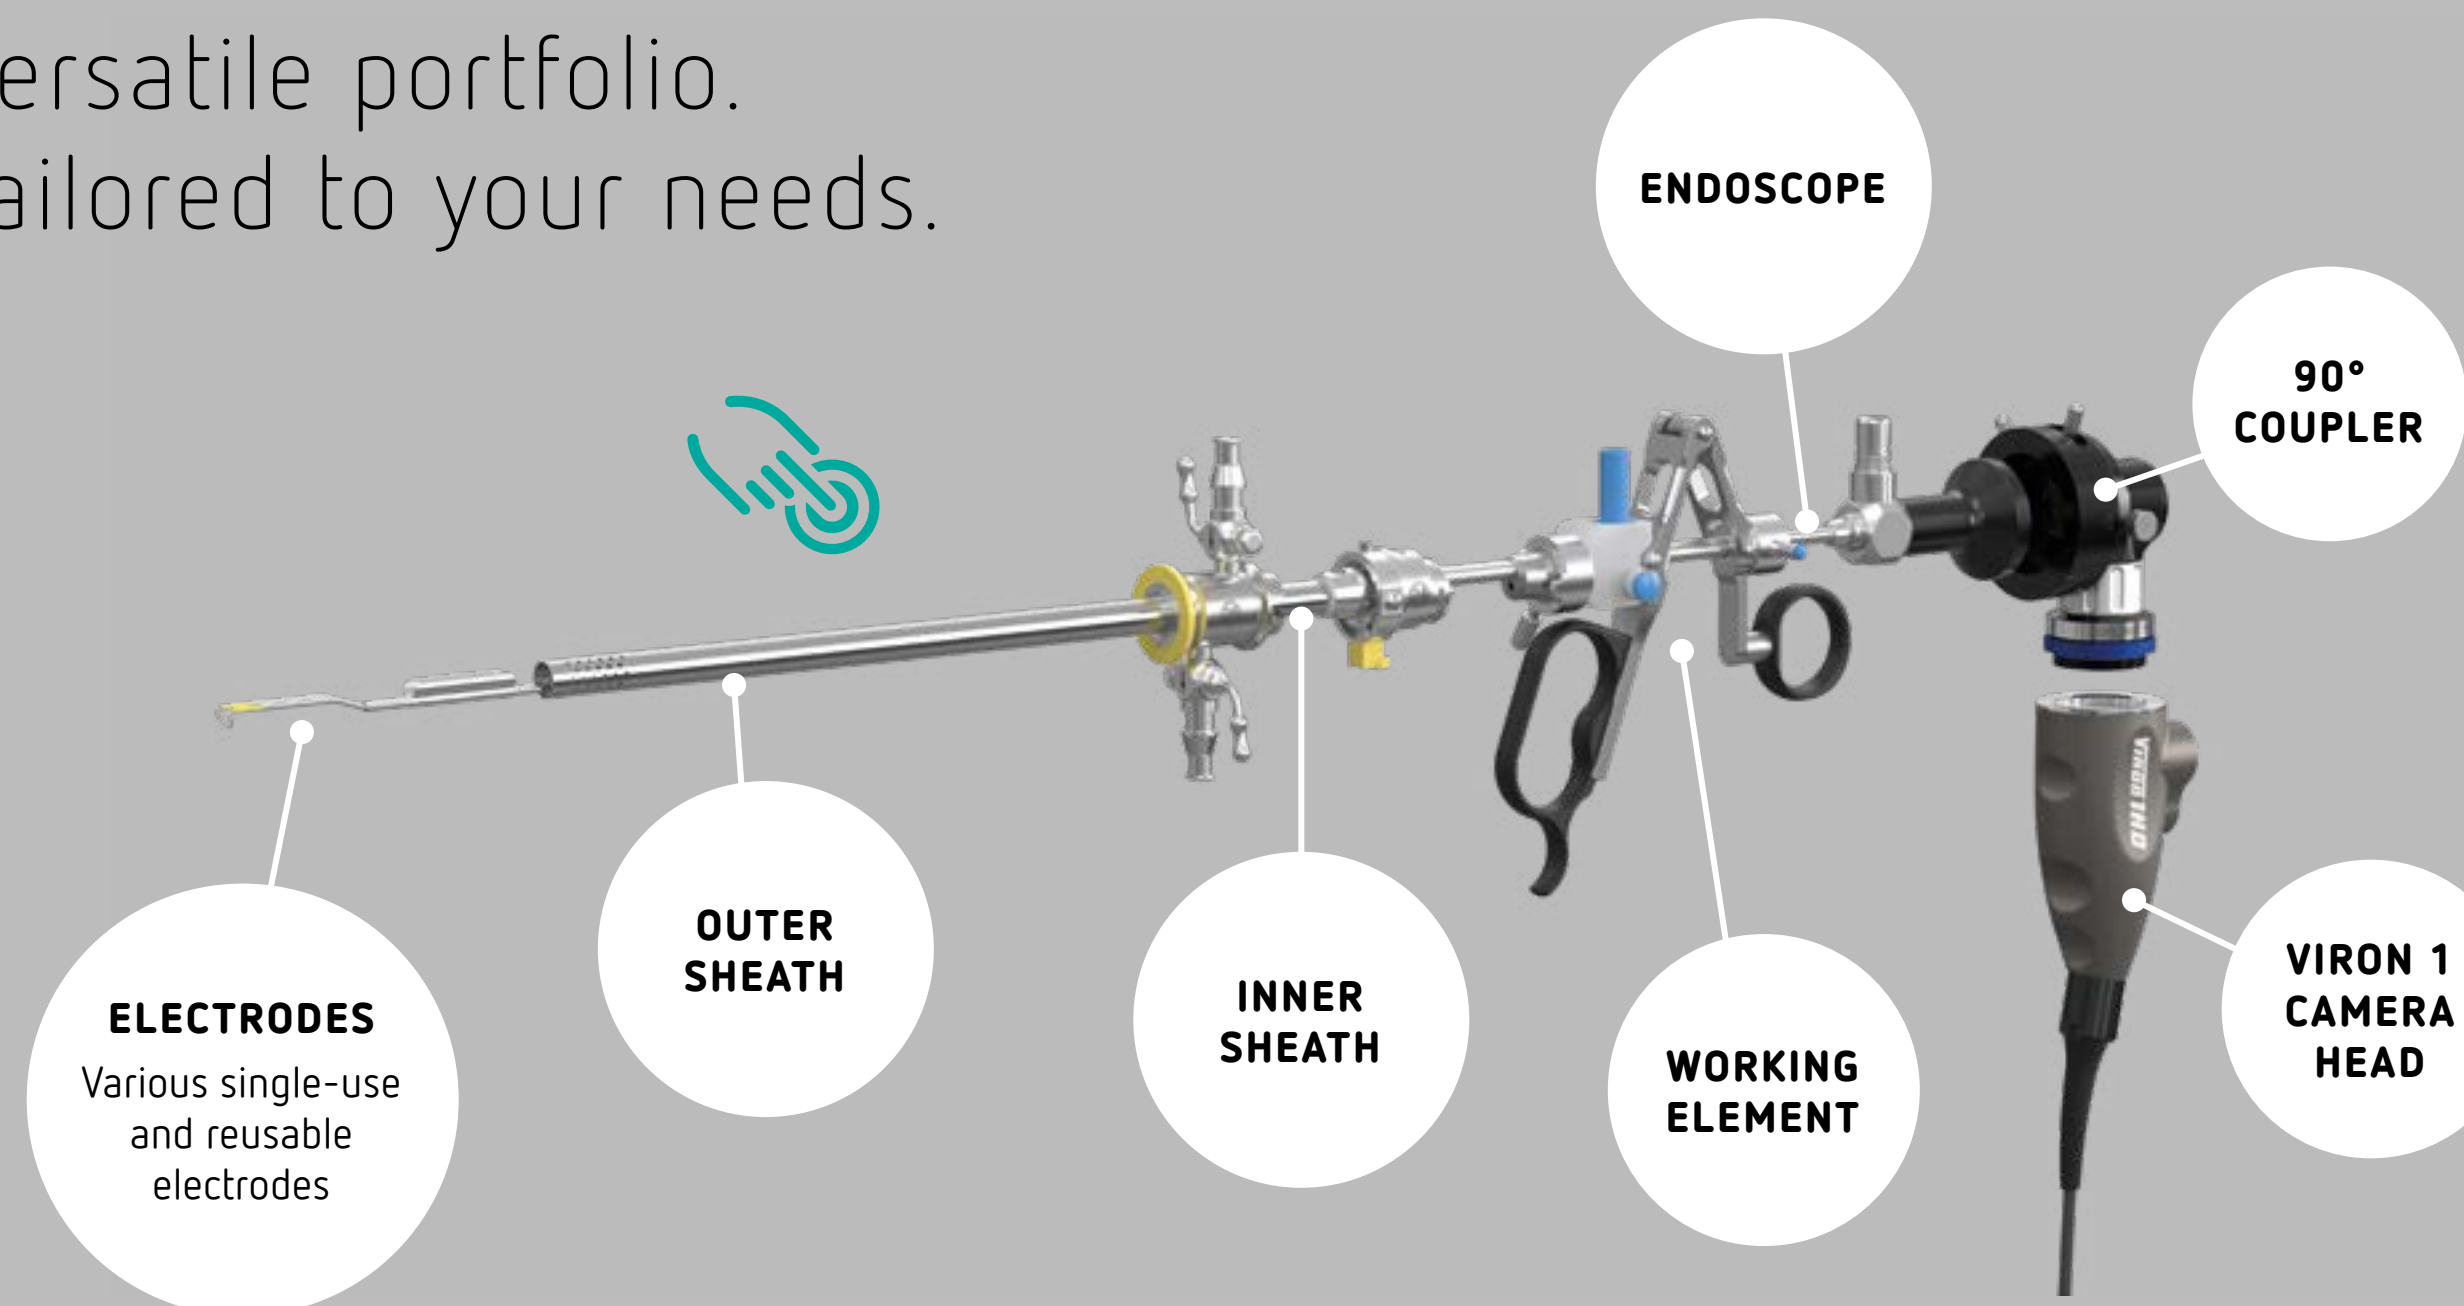

One integrated solution for resection

The VIO® 3 with highCUT bipolar mode plus the VIRON1 imaging system and Erbe resectoscopes work together to form one connected system during gynecological and urological resection procedures.

Versatile portfolio.
Tailored to your needs.

**Less dilation.
Better access.**

The design of the mini-resectoscope allows reduced cervical dilation.

See clearly

Maintain control. Consistent visual clarity.

- **Full-HD imaging system:** experience clear and bright full-HD visualizations throughout the procedure with VIRON 1
- **HD endoscopes:** manufactured in Germany, for a wide range of applications in gynecology and urology. Sapphire glass makes them especially resistant to scratches and damage

Treat precisely

Controlled tissue effects support clinical outcomes.

- **highCUT bipolar mode:** homogeneous and controlled cutting with highCUT bipolar mode used by the resectoscopes

Work efficiently

Designed for ease. Optimized for handling.

- **Less fatigue during lengthy procedures:** The ergonomic handle design and the quick-lock mechanism support intuitive and easy use
- **Robust construction:** HD endoscopes are stability-optimized for durability in demanding clinical environments
- **More comfortable to use:** the lightweight and ergonomically designed VIRON 1 camera head features three programmable buttons
